EDUCAUSE

EDUCAUSE is a nonprofit association whose mission is to advance higher education by promoting the intelligent use of information technology. It helps those who lead, manage, and use information resources to shape strategic decisions through a diverse portfolio of information resources, policy initiatives, professional development, leading-edge programs, and online communities. Its membership comprises more than 1,800 colleges, universities, and organizations in the United States and abroad. Learn more about EDUCAUSE at www.educause.edu.

The Campus Computing Project

Begun in 1990, The Campus Computing Project is the largest continuing study of the role of information technology in U.S. higher education. The project is widely cited as the definitive source for data and information about IT implementation, planning, and policy issues affecting American colleges and universities.

FOREWORD

Colleges and universities have long been entrusted with opening young minds, safeguarding and disseminating accumulated knowledge, enlarging humankind's intellectual frontiers, and serving their societies. These are tremendous and exciting responsibilities. The myriad higher education institutions have addressed these challenges in a remarkable fashion.

In today's knowledge-driven era, higher education is a precondition to full and satisfying participation in the global economy and society. Globally, the rate of participation in higher education continues to rise. Today's colleges and universities continue to prosper and adapt by letting many flowers bloom. Differing institutional structures have emerged to address the changing educational and economic needs of changing populations. New information technologies are developed and adapted to serve differing learning styles. Higher education institutions have moved far away from the ivory tower and now extend into the very fabric of the diverse societies in which they operate.

Higher education is a rich tapestry. No volume can capture this richness and complexity comprehensively. The Pocket Guide to U.S. Higher Education provides a series of markers that outline the shape and complexity of higher education. More importantly, this guide identifies a variety of resources and organizations that can add detail to specific aspects of this enterprise. And, of course, many colleges and universities maintain informative Web sites that detail specifics about their history, offerings, faculty, and student body.

This guide is made possible through the joint efforts of Casey Green, Director and Founder of The Campus Computing Project, and the dedicated and creative staff of EDUCAUSE who were involved in its production.

ASSOCIATIONS AND ORGANIZATIONS

Higher education in the United States is more than just 3,700 degree-granting institutions and 15 million students. Organizationally, it is also a matrix (some might say maze) of associations, organizations, and professional groups. Some, like the American Council on Education (ACE), the Association of American Universities (AAU), or the American Association of Community Colleges (AACC), reflect institutional interests and memberships. Organizations such as the American Psychological Association (APA) or the Modern Language Association (MLA) are academic (or disciplinary) societies that draw primarily on individual faculty memberships. Still others, such as the International Association for Management Education (AACSB) or the American Society for Engineering Education (ASEE), focus on academic programs and departments and are also often responsible for accrediting academic programs.

These associations and organizations are very influential with their institutional and individual members. Almost all have annual meetings, and most also sponsor one or more publications ranging from monthly newsletters to glossy magazines and academic journals; many also publish one or more electronic newsletters or other online documents.

The following list identifies many of the most significant academic, professional, and institutional associations that play an important role in U.S. higher education.
